Shield your laptop with analysis achieved over the past ten years. There are opinions, forums and eBooks on the Internet that may present a total safety resolution for you - FIVE LAYERS DEEP.

Should you're thinking of protecting your Mac from malware threats, you then're considering clearly. And you've got most likely arrived at that call after having weighed the professionals and cons of getting one or not, otherwise you've been the sufferer of a recent malware attack.

Regardless of the case, the belief that Macintosh programs are not susceptible to threats is a fallacy. It might have been true for a quick period in the early evolutionary days of the Mac, however this isn't true today. And these machines are equally coming beneath attack from hackers and malware threats

There are many antivirus programs that protect the Mac. And a few main applications like BitDefender, Symantec and Kaspersky have been developing this software program for some time now. However web security for the Mac is a reasonably new idea, so you may solely discover a handful of programs that develop it.

Symantec Norton

Symantec is within the forefront of the battle in opposition to malware threats that assault Macs. Its software has been five years in development and does not disappoint.

Tech Radar, one of the main technology evaluation sites, has rated it 4 stars out of five and exhibits that it has the best instruments for phishing threats, id theft and protection from malicious software threats.

Among the options you get with Symantec Norton for Mac OS X are antivirus and firewall protection. The antivirus software program has shown in tests to be very efficient at virus detection and removal. And it doesn't put any pressure on sources as has been evident in other Symantec packages in the part.

Its firewall component is highly effective and Symantec recommends that you simply flip off the Mac OS X firewall to avoid crashes and get the maximum protection from it. You flip off the Mac firewall by going to System Preferences > Security > Firewall.

## McAfee

McAfee Internet Safety for Mac is comprehensive safety from hackers, identification theft, malware and lots of different malicious software program threats. It gives 1 year subscription on your Macintosh and it's at one of the lowest prices online.

Among the essential options and instruments you get with it are Identity Safety, Anti-phishing, McAfee Firewall, External Drive, and Scanning & Disinfection. A menace it's important to beware of on-line is phishing and this comes in many forms. McAfee has the right anti-phishing instruments that shield you from phishing scams and social networking web site attacks which are rising and are intent on stealing your personal information. So it permits you to e mail and chat with family and mates online with safety and confidence.

After all as a Mac person you are not vulnerable to viruses and other malware threats which have traditionally attacked PCs and different systems. But the web has changed part of this and Mac customers are actually just as susceptible to those dangers as PC users.

## Summary

There are just a few different prime internet security programs for Mac systems. And so they provide many good instruments and features, but they don't seem to be as efficient as Norton and McAfee, who've been creating their applications for years now. Your choice between these two prime packages will rely on your particular needs. And if value is a major factor, then we recommend you download McAfee Web Safety for Mac, which is cheaper.
